# Research of needs of transgender people

Gvanza Kvinikadze

2018

# Aim of the research

Studying the complex needs of transgender people  
Health-focused

## Research period

- January-June 2018
- In-depth interviews – March-April

## Research method

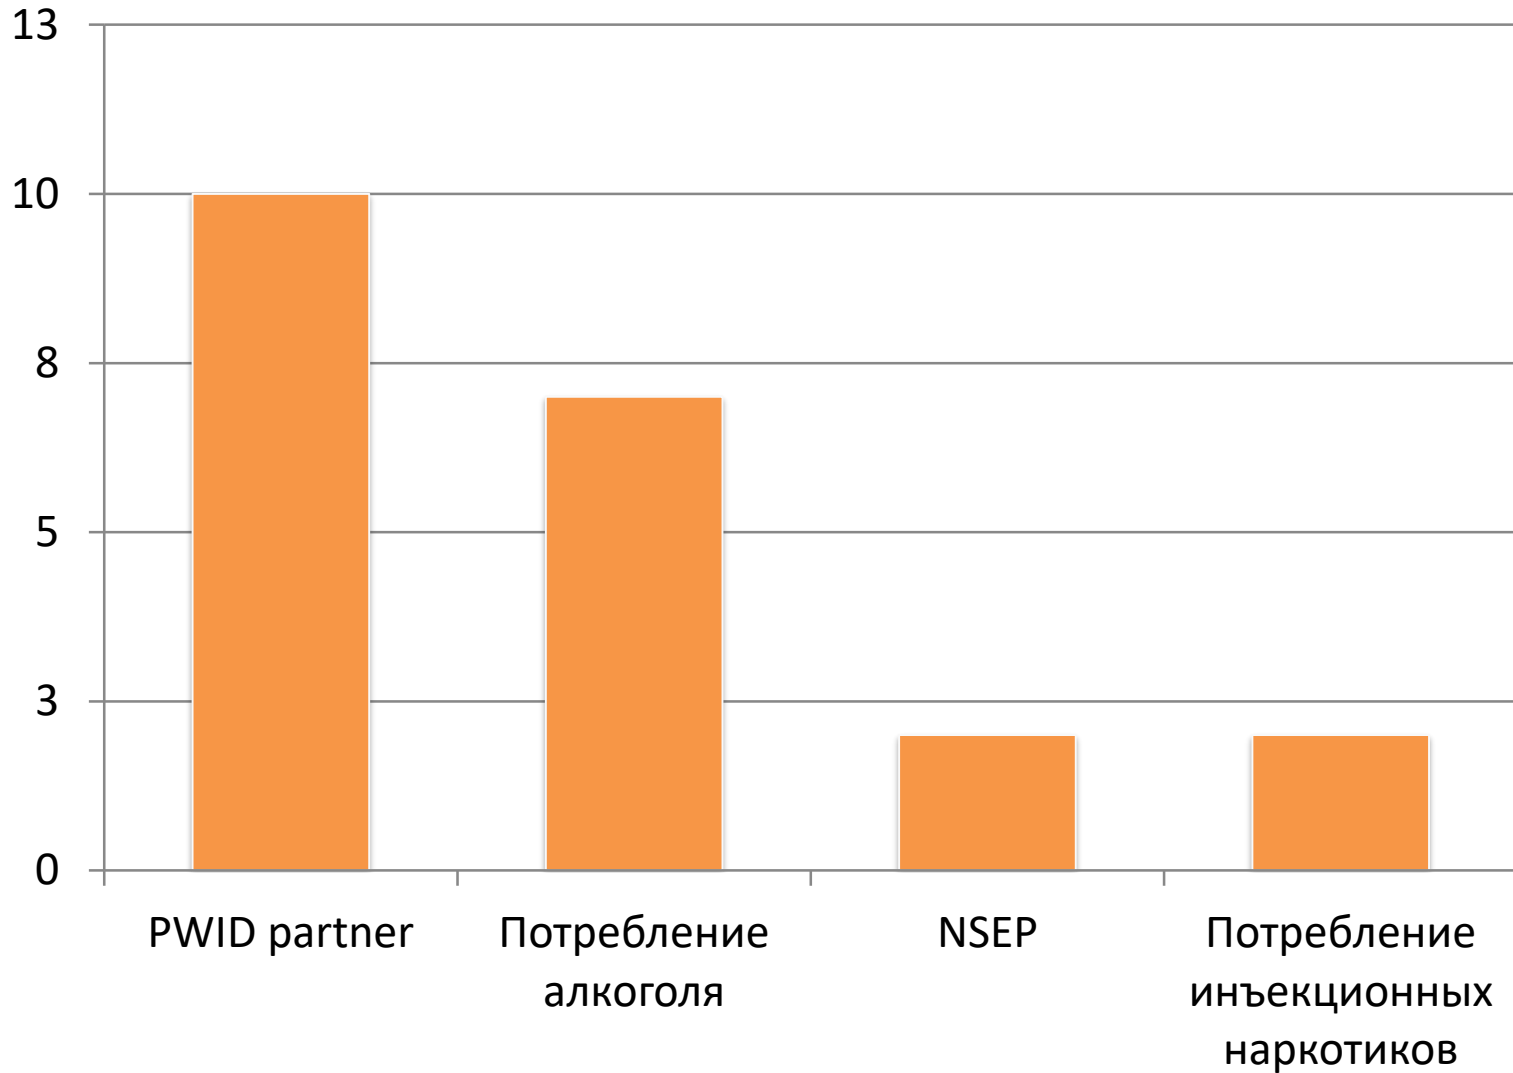

- Qualitative research method
- Interview guide development
- Conduction of 14 in-depth interviews
- Average duration of an interview - 40 min

# Hypothesis

- ❖ **Among transgender people there is a high rate of drug and alcohol use, which does not correspond to the presence of harm and rehabilitation services.**

## Data analysis

# Data analysis

## Access to healthcare services

- Health services utilization is low
- Lack of trust to health personnel
- Targeted services are not available

## NGO sector

- **Equality Movement, Tanadgoma NGO, Women Initiatives Support Group.**
- HIV, HCV, HBV, STI tests, psychological and legal support, PrEP

# Data analysis

- ID
- Physical and mental violence
- Violence from police
- Hormone therapy
- Situation in the penitentiary system and shelter

## Recommendations

- Solving the ID problem
- Improve access to health services - public and private clinics

# Recommendations

- Implementing awareness programs for health workers to provide quality services based on human rights and dignity
